

Environmental Law in Spain

By

Mar Campins Eritja
Lucía Casado Casado
Juan Emilio Nieto Moreno
Antoni Pigrau Solé
Isabel Pont Castejón

Derived from the renowned multi-volume *International Encyclopaedia of Laws*, this book provides ready access to legislation and practice concerning the environment in Spain. A general introduction covers geographic considerations, political, social and cultural aspects of environmental study, the sources and principles of environmental law, environmental legislation, and the role of public authorities.

The main body of the book deals first with laws aimed directly at protecting the environment from pollution in specific areas such as air, water, waste, soil, noise, and radiation. Then, a section on nature and conservation management covers protection of natural and cultural resources such as monuments, landscapes, parks and reserves, wildlife, agriculture, forests, fish, subsoil, and minerals. Further treatment includes the application of zoning and land-use planning, rules on liability, and administrative and judicial remedies to environmental issues. There is also an analysis of the impact of international and regional

legislation and treaties on environmental regulation.

Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable resource for environmental lawyers handling cases affecting Spain. Academics and researchers, as well as business investors and the various international organizations in the field, will welcome this very useful guide, and will appreciate its value in the study of comparative environmental law and policy.
